AT HOME

By serving customers in both outdoor and emerging markets, BioLite finds itself at the helm of frontier energy: locations where energy is critical, but resources are sparse...

OFF-GRID

...situations where a good light, a reliable charge, or a warm meal can transform your environment. We are reinventing the ways we can make you feel at home, off-grid, no matter where you are.

The Future Of Energy Is Shared By All

And You Are Helping Make The Future Happen

An extra hour of study at night; a charged phone that can send a mobile payment; a family meal cooked without inhaling smoke. These are just a few of the ways energy access can transform an off-grid household – and all of them are core to BioLite's mission.

When you purchase a BioLite product, you support our work delivering safe, affordable ways to cook, charge, and light life for the three billion people who currently live in energy poverty. By building a future of renewable energy together, we can keep that future sustainable – and bright.

BioLite Combustion: The Secret To A Better Fire

Powered by the 12,000 mAh USB-rechargeable battery, the FirePit's internal fan circulates air via 51 jets throughout its burn chamber. This calibrated oxygen flow creates a more complete and efficient burn, combusting particulate matter before it can escape. The result? Smokeless flames and more fire per log.

3D Slimfit Construction

The BioLite team was inspired to design headlamps that could fit so seamlessly that it empowered you to see, yet you immediately forgot its presence. Through the redistribution of weight, a flush front, and smart fabrics, the BioLite HeadLamp series redefines how a headlamp sits and fits, reimagining one of the oldest wearables in the outdoor industry.

We want to help retail employees better understand the BioLite ecosystem. With every new product launch, we offer training videos and quick reference guides created with retail employees in mind.

Marketing Support

We maintain a rich library of assets to support your marketing efforts. From ambassador photography to Facebook-friendly videos and SEO optimized blog content, our team is ready to support social and digital efforts.

Brand Guidelines

Visit BioLiteEnergy.com/brand to download fonts, logos, product imagery and additional creative assets.

BioLite POP Displays

We have POP solutions for your store. Please reach out to us directly or your sales rep for more information

BioLite Dealer Inquiries

Want to become a BioLite dealer or place a new order? Please follow one of these links to fill out a form with your details and we will follow up with you.

Alternatively you can also reach out to us at **sales@bioliteenergy.com**.

Glossary Of Terms

Power (Watts [W])

Power describes the amount of instantaneous energy available to operate or charge a device, typically measured in Watts [W]. In BioLite products, we use Watts to describe how much energy you can generate from our Solar Panels and Thermoelectrics. This energy is most often used to fill the batteries of other devices. Typically, the more powerful (higher watts) a power source is, the faster it will charge other devices.

Power Storage (Watt Hours [Wh] or Milliamp Hour [mAh])

The capture of energy produced at one time for use at a later time - generally in a battery. BioLite devices like the CampStove, BaseCamp, SolarPanel Series, Charge Series and Lanterns contain highly efficient, compact, Lithium Ion batteries for power storage.

Lumens

The amount of light emitted per second in a unit solid angle from a uniform source in all directions. Essentially lumens measures the brightness of a light source.

Thermoelectrics

A fundamental physical property of certain semiconductor materials that directly convert heat flows into electricity. Thermoelectrics are solid-state (meaning no moving parts) and work for many years without degradation. BioLite uses thermoelectrics in the CampStove and BaseCamp to turn fire into electricity.

Parallel Innovation

BioLite develops core energy technologies that are applicable to both Outdoor and Emerging Markets. We then design products unique to the customer needs in each respective market. Profits from our Outdoor Markets are reinvested into our Emerging Markets in order to help us reach self-sustaining scale in Emerging Markets. You can think of it as an alternative to venture capital investment, where our Outdoor customers become the catalysts for energy access to the people who need it most. This is not charity, as our customers in Emerging Markets still pay for products, but rather catalytic investment to help us launch a business which can reach millions of people with clean, affordable energy.

ANSI FL-1

This standard is a set of flashlight and headlamp performance guidelines. ANSI FL-1 allows for direct comparisons can be made between lighting products from different manufacturers. Adherence to the FL1 Standard is voluntary, although the vast majority of manufacturers have adopted the standard. Ratings are defined for the following performance criteria:

- Light Output [Lumens]
- Peak Beam Intensity [Candela]
- Beam Distance [Meter]
- Runtime [Hours]
- Water Resistance [IPX Rating]

USB-C PD (Power Delivery)

Power Delivery (PD) is a protocol specification that allows for fast, flexible and safe charging. This technology allows a variety of devices to fast charge over a common USB-C connection and allows both power-providing and power-receiving devices to negotiate the most efficient and safe setting.

ChromaReal

ChromaReal is an LED technology that BioLite uses for applications where complete and accurate lighting is important. Any product with ChromaReal will have a Color-Rendering Index (CRI) of 90 or higher. The CRI is a measure of how full spectrum the emitted light is and how accurate colors will appear.

3D SlimFit

3D SlimFit refers to BioLite's proprietary construction method for headlamps, integrating electronics directly into softgoods for an unprecedented fit and profile. The "3D" refers to 3 dimensions identified for high-performance fit: 1) flush, low-profile front housing for no bounce; 2) distributing weight across the headlamp for a more natural feel; and 3) moisture-wicking fabrics that keep the user cool and dry during activity.

Notes

CLIMATE NEUTRAL
CERTIFIED

BioLite is the proud co-creator of Climate Neutral, an independent non-profit with a mission to address global climate change by recruiting and enabling companies to measure, reduce, and offset 100% of their carbon emissions immediately.
